

OUR WORK SAFETY AND ENVIRONMENTAL POLICY

Management's Work Safety and Environmental Policy Statement

Industrial and plant safety and environmental protection are key issues to ensure our claim as a leading manufacturer of specialty materials.

We promote innovative projects and take account of industrial and environmental protection as well as the prevention of accidents in the education and training of our employees. This primarily includes the awareness of health and safety as well as environmental concerns and the information of our employees. A responsibility for protecting the environment and staff safety is self-evident for us.

The compliance with legal obligations is a matter of course for us.

The further training of our employees and the continuous reviewing of current legal requirements ensures legal conformity. We maintain an open dialogue with all interested parties.

We maintain an industrial safety and environmental management system for the continuous improvement of our industrial safety and environmental performance.

We have integrated a thorough industrial safety and environmental management in our business strategies to ensure compliance with our industrial safety and environmental guidelines. This includes a safety management system for the prevention of accidents. We consider it completely natural to continually improve our environmental and work performance with measurable targets, to keep minimizing risks, and to exploit available opportunities.

The promotion of the industrial safety and environmental awareness of all employees is part of our corporate culture.

We promote and train the awareness of our employees in terms of environmental protection, industrial and plant safety at all operational levels and provide sufficient personnel resources for the industrial safety and environmental management. Each member of management is responsible for adhering to those responsibilities applicable to his ambit. We are committed to provide safe and healthy working conditions for the prevention of work-related injuries and illnesses and actively involve our employees and listen to their feedback.
